

User Story #1	User Story #2	User Story #3
As a user, I want to organize my notes, so that I can easily access them in less time.	As a user, I want to edit notes, so that I can update them whenever I want.	As a user, I want to filter notes, so that I can view the notes that I am only interested in.
Acceptance criteria: Given notes, when user puts a note in a notebook, he can later access it and all the other notes related to that notebook.	Acceptance criteria: Given notes, when a user wants to update the content, he is able to change a specific note.	Acceptance criteria: Given notes, when user filters notes with specific identification, then he is able to view only those desired notes
User Story #4	User Story #5	User Story #6
As a user, I want to delete notes, which I do not need anymore or which are wrong.	As a user, I want to display only the notes from one notebook.	As a user, I want to add notes in existing notebook, so that I can easier access them later.
Acceptance criteria: Given a not needed note, when user deletes a note, then it is no longer visible in the notebook.	Acceptance criteria: Given notes, when user displays notes of specific notebook, then only those notes are visible.	Acceptance criteria: Given notes, when user adds note in a specific notebook, then it can later be found in that notebook.
User Story #7	User Story #8	User Story #9
As a user, I want export some note as a txt file, so that I can have it saved on my computer.	As a user, I want import some txt file, so that I can have it in my notes.	As a user, I want share some note, so that some person would have access to it.
Acceptance criteria: Given notes, when the user exports a note, then that note is saved on the computer.	Acceptance criteria: Given notes, when the user imports a txt file, then that file gets saved as a note.	Acceptance criteria: Given notes, when the user wants to share some note, an URL address gets generated via which the note can be accessed.
